ISS ESG has reviewed the Regulatory Technical Standards (RTS) pertaining to the EU SFDR and mapped the principal adverse impact requirements to data points covered by its proprietary ESG data. Financial market participants will have to use the core mandatory indicator comprising of 14 indicators for investments in companies, and two indicators for investments in sovereigns and supranationals. Moreover, they will have to choose at least one indicator each from the additional environmental and social indicator sets.

Indicator Notes

1. Metric(s) - GHG Emissions - Scope 1 GHG emissions, Scope 2 GHG emissions, Scope 3 GHG emissions, Total GHG emissions.

Action Taken -

2. Metric - Carbon footprint.

Explanation - The displayed number is calculated using the value of all investments in the denominator.

Proxy Justification - Since the reporting on Scope 3 GHG emissions shall apply from 1 January 2023, ISS ESG offers two factors to calculate carbon footprint: one based on scope 1 and 2 emissions, and the other based on scope 1, 2, and 3 emissions.

Action Taken -

3. Metric - GHG intensity of investee companies.

Explanation - The displayed number is calculated using the value of all investments in the denominator.

Proxy Justification - Since the reporting on Scope 3 GHG emissions shall apply from 1 January 2023, ISS ESG offers two factors to report on GHG intensity: based on scope 1 and 2 emissions, and based on scope 1, 2, and 3 emissions.

Action Taken -

4. Metric - Share of investments in companies active in the fossil fuel sector.

Explanation - The displayed share is in relation to all investments.

Action Taken -

*Coverage considers all investments, while applicable coverage only considers corporate assets within industries for which the metric is considered material in the context of the ISS ESG Corporate Rating. For more information, see the Methodology page at the end of the report.

Indicator Notes

5. Metric - Share of non-renewable energy consumption and non-renewable energy product of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources.

Explanation - The displayed number is calculated using the value of all investments in the denominator.

Proxy Justification - The PAI indicator shall encompass "non-renewable energy sources" defined as energy sources other than those defined as renewable sources as referred to in Article 2(1) of Directive (EU) 2018/2001 in directive referred to above. ISS ESG includes the following as non renewable energy sources: coal, nuclear, oil and natural gas. Minor discrepancies may arise due to regulatory definition being inclusive but not limited in nature.

Action Taken -

6. Metric - Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector.

Explanation - The displayed numbers are calculated using in the denominator the value of all investments, including investments not related to investee companies in the respective high impact climate sectors.

Action Taken -

*Coverage considers all investments, while applicable coverage only considers corporate assets within industries for which the metric is considered material in the context of the ISS ESG Corporate Rating. For more information, see the Methodology page at the end of the report.

Indicator Notes

7. Metric - Share of investments in investee companies with sites/operations located in or near biodiversity-sensitive areas where activities of those investee companies negatively affect those areas.

Explanation - The displayed share is in relation to all investments.

However, the standards/directives referenced in the regulation overlap with those applied in the proxy to a large extent.

Action Taken -

8. Metric - Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average.

Explanation - The displayed number is calculated using the value of all investments in the denominator.

Proxy Justification - The PAI indicator refers to various types of emissions to water. ISS ESG collects chemical oxygen demand (COD), a commonly used indicator measuring emissions to water which can serve as a proxy to the PAI indicator's requirements. ISS ESG collects data only for companies in most relevant industries.

Action Taken -

9. Metric - Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average.

Explanation - The displayed number is calculated using the value of all investments in the denominator.

Proxy Justification - ISS ESG collects company reported hazardous waste, relying on companies' own definitions, which may differ from the definition adopted in the regulation. Radioactive waste may or may not be included as a sub-sector of hazardous waste.

Action Taken -

*Coverage considers all investments, while applicable coverage only considers corporate assets within industries for which the metric is considered material in the context of the ISS ESG Corporate Rating. For more information, see the Methodology page at the end of the report.

Methodology

This portfolio report draws on ISS ESG's SFDR Principal Adverse Impact Solution, which includes data on corporate, as well as sovereign and supra-national, issuers in line with the mandatory, as well as additional, SFDR Principal Adverse Impact (PAI) indicators. ISS ESG's SFDR Principal Adverse Impact Solution builds on a variety of ISS ESG research products, leveraging justifiable proxies in the absence of reported and disclosed data. Portfolio-level metrics are calculated in accordance with the specifications of the Regulatory Technical Standards (RTS) published by the European Commission as well as additional guidance published by the European Supervisory Authorities (ESAs).

In accordance with recommendations from the ESAs, the PAI metrics displayed in this report have been calculated using as a denominator the value of all investments, including those investments for which the respective PAI indicator is not applicable as well as investments where data is missing. Since this calculation approach is equivalent to imputing a value of 0 for any position without data, PAI metrics displayed in this report may be small compared to a calculation approach which limits the scope of the denominator to the value of investments to which the respective PAI indicator is applicable and for which data is available. The "coverage" column displays the share of positions for which data is available per PAI indicator, expressed as a percentage of all investments.

Pursuant to ISS ESG's Corporate Rating methodology, some PAI indicators are material only for certain industries. Coverage may therefore be lower for these PAI indicators, as data is typically only disclosed by companies in relevant industries. In such cases, the report provides an additional applicable coverage value in parenthesis which only considers corporate assets within industries for which the metric is considered material in the context of the ISS ESG Corporate Rating.

While most quantitative metrics included in ISS ESG's SFDR Principal Adverse Impact Solution are sourced directly from corporate disclosures, some quantitative metrics, including GHG emissions and non-renewable energy production data, is either reported or estimated/modelled in the absence of trustworthy company disclosure.

The PAI indicators displayed in this report either refer to point in time assessments (e.g., share of investee companies with certain characteristics), or to outcomes over a given time period (e.g., average emission intensity is calculated for a fiscal year).
